PEWA-F02-R01 — Menu Structure Examples

Demonstration of proposed classification applied to representative business types

Each example shows: Named Menu(s), Categories used (with Classification IDs where Core), independent dimensions (tags, occasions), and notes on item reuse. Items themselves are illustrative only.

1. Independent Casual Restaurant (International + Local)

Named Menus: Lunch Menu; Dinner Menu; Drinks.

Categories (Dinner):

- Appetizers / Starters (CAT-001) — Spring rolls, Soup of the day, Mixed salad
- Mains (CAT-004) → Grilled (CAT-010), Seafood (CAT-011), Pasta (CAT-014), Rice Dishes (CAT-015)
- Sides (CAT-005) — Fries, Steamed vegetables, Ugali (also tagged Staple)
- Desserts (CAT-006)
- Beverages (CAT-007) → Coffee, Soft drinks, Beer, Wine

Independent dimensions: Meal Occasion = Lunch/Dinner; Vegetarian tag; Spice Level; Allergen tags on each item.

Item reuse: 'Grilled Tilapia' appears under Seafood and can be assigned to both Lunch and Dinner menus without duplication.

2. East African Local-Food Restaurant (Kenya / Tanzania style)

Named Menus: Main Menu (all-day); Breakfast (optional).

Categories (preserving cultural structure):

- Staples / Swallow (CAT-020) — Ugali, Chapati, Rice, Matoke (if UG-influenced)
- Stews & Sauces (CAT-021) — Beef stew, Chicken stew, Bean stew, Groundnut sauce
- Leafy Greens (CAT-022) — Sukuma wiki, Cabbage
- Bean & Legume Dishes (CAT-023) — Maharage, Mixed beans
- Nyama Choma / Grilled (CAT-025 / CAT-010) — Goat, Beef, Chicken (by weight or portion)
- Street Food & Snacks (CAT-024) — Samosas, Mandazi, Mishkaki
- Beverages — Chai, Fresh juice, Soda, Local beer

Note: Ugali is not forced under 'Sides'. Combos (CAT-051) such as 'Ugali + Stew + Sukuma' are common commercial packages.

Tags: Cuisine = East African / Kenyan; Traditional = Yes; Allergen (peanuts if groundnut sauce).

3. Multi-Location Café Chain

Named Menus: All-day Café Menu; Seasonal Specials (location-selectable).

Categories:

- Coffee (CAT-030) — Espresso, Americano, Latte, Cappuccino, Flat white (sizes via modifiers)
- Tea (CAT-031)
- Cold Beverages / Juices (CAT-032)
- Pastries (CAT-041) — Croissant, Danish, Muffin
- Light Food — Sandwiches, Salads, Breakfast items (CAT-053)

Multi-location: Single item master for 'Latte'. Price zones (city vs suburban); availability of seasonal pastry per location; central recipe lock.

Modifiers (independent): Size, Milk type (dairy/oat/almond), Syrup, Extra shot, Temperature.

4. Hotel with Several Service Points

Service points: Main Restaurant; Lobby Café; Pool Bar; Room Service; Banqueting.

Approach: One hotel-wide item master. Each service point has one or more Named Menus that reference a subset of items. Categories can be shared or service-point specific presentation sections.

Example Main Restaurant Dinner: Appetizers, Soups, Salads, Mains (Grilled, Seafood, Local Specials including Ugali options), Sides, Desserts, Wine List, Other Beverages.

Lobby Café: Coffee, Tea, Pastries, Light sandwiches (subset of same sandwich items).

Pool Bar: Cocktails, Beer, Soft drinks, Sharing plates / Snacks.

Same 'Club Sandwich' item appears on Restaurant Lunch, Café and Room Service menus with possible price override by outlet.

5. Bakery / Confectionery

Categories: Breads (CAT-040); Pastries & Viennoiserie (CAT-041); Cakes & Gateaux (CAT-042); Cookies & Small Bakes (CAT-043); Savoury Bakes; Beverages (if café component).

Tags: Vegetarian/Vegan options; Allergen (gluten, egg, dairy, nuts) critical; Portion (slice / whole cake).

Combos: Coffee + Pastry meal deals common.

6. Bar / Beverage-Focused Venue

Categories: Beer (CAT-033); Wine (CAT-034); Spirits & Cocktails (CAT-035); Soft Drinks & Mocktails; Bar Snacks / Sharing Plates (CAT-052).

Independent: Happy-hour / promotion tags; Spice level on some snacks; Allergen on food.

7. Delivery-Only Kitchen (Cloud Kitchen)

Often multi-brand from one kitchen. Each brand has its own Named Menu and category presentation, but items share a single kitchen item master (recipes, allergens, stock).

> Example Brand A (Burgers): Burgers, Sides, Drinks, Combos.
>
> Example Brand B (Local): Staples, Stews, Nyama Choma, Snacks — reusing the same 'Grilled Chicken' or 'Chips' item where applicable.

Critical: availability and 86 status pushed in real time; allergen data consistent across brands.

8. Business Offering Combos and Configurable Meals

Categories include Combos & Meal Deals (CAT-051). A combo is a commercial object that references component items (or component groups) with rules (choose 1 staple + 1 stew + 1 green).

> Example: 'Local Lunch Combo' = Ugali (CAT-020) + Beef Stew (CAT-021) + Sukuma (CAT-022) + Soft drink. Components remain individually sellable; combo has its own price and possibly its own allergen roll-up.

Configurable: customer selects from allowed lists; system validates and calculates price/allergens from selected components.

Modifiers still apply at component or combo level (e.g. spice level on stew).
