PEWA-F02-R01 — Reconciliation and Gap Report

Duplicates, conflicts, evidence weaknesses and open decisions

1. Duplicate or Overlapping Classifications

• 'Grilled / Barbecue' (CAT-010) and 'Nyama Choma / Grilled Meats (Regional)' (CAT-025): intentional overlap. CAT-025 is the culturally specific East African expression; CAT-010 is the generic global parent. Recommendation: keep both; map regional items primarily to CAT-025 and secondarily to CAT-010 for cross-cuisine analytics.

• 'Sides / Accompaniments' (CAT-005) vs 'Staples / Swallow' (CAT-020): potential confusion if ugali is placed under Sides. Explicit rule: when the item functions as the meal foundation in East/Southern/West African contexts, use Staples (CAT-020), not Sides.

• 'Soups' (CAT-002) vs 'Stews & Sauces' (CAT-021): thick African stews/sauces are not European-style soups. Keep separate; allow dual-tagging only when a business insists.

• 'Street Food & Snacks' (CAT-024) vs 'Appetizers' (CAT-001) vs 'Sharing Plates' (CAT-052): boundary is service context and portion intent. Street items sold as quick bites stay in CAT-024; plated openers in CAT-001; explicitly shared platters in CAT-052.

2. Conflicting Terminology

• 'Entrée': in US English often means main course; in classical French means starter. Catalogue uses 'Main Courses / Entrées' with note on regional ambiguity. Prefer 'Mains' in UI for clarity where possible.

• 'Ugali / Ubugali / Posho / Sadza / Pap': same conceptual staple, different languages/regions. Synonym table mandatory; single Classification ID (CAT-020) with alternative names.

• 'Groundnuts' vs 'Peanuts': same allergen; dual naming required for African markets.

• 'Shellfish': sometimes used loosely for both crustaceans and molluscs. Allergen tags keep them separate (EU requirement).

3. Uncertain Classifications

• Whether a 'Rolex' (Ugandan chapati-omelette wrap) is primarily Street Food, Sandwich, or Breakfast item. Proposed: primary CAT-024 (Street), secondary tags for Breakfast and Sandwich-style.

• Modelling of staple + sauce as one configurable meal item versus two linked items. Both patterns exist in practice. PEWA decision needed on preferred default.

• Depth of subcategory under Mains (protein vs cuisine vs cooking method). Evidence supports all three; recommendation is flexible sub-grouping rather than rigid single axis.

4. Underrepresented Cuisines and Regions

• Burundi: dish lists exist (isombe, ubugali, ibiharage, mukeke, brochettes, boko boko harees) but few full restaurant menu structures published in accessible sources.

• Central Africa (DRC, Congo, CAR, etc.) beyond isombe/cassava-leaf overlap with Rwanda/Burundi: thin evidence in this research.

• Horn of Africa (Ethiopia, Eritrea, Somalia) injera/wat structure not given dedicated Core categories; Candidate for later Regional extension.

• Detailed formal menu section practices in North and West African restaurants less documented than individual dish lists.

5. Weaknesses in Available Evidence

• Research relied on secondary sources (culinary guides, travel food writing, industry blogs, standards documents). No systematic sampling of live digital or printed menus from the target East African markets was performed.

• Quantitative data on how customers actually filter or search menus by region was not located.

• Allergen regulatory detail for restaurant (non-prepacked) food in most African jurisdictions is sparse compared with EU/US.

• Multi-location practice literature is dominated by Western and large-chain POS vendors; applicability to small multi-outlet African groups is inferred.

6. Matters Requiring PEWA Decisions

1. Mandatory vs optional depth of the Core library for new tenants.
2. Default allergen set for multi-country African deployments (recommend Core 9 + peanuts/sesame emphasis).
3. Whether staple + sauce combinations are modelled as single configurable items, two linked items, or both patterns supported.
4. Governance workflow for adding, renaming, mapping and retiring classifications (who approves, review cycle).

5. How aggressively to promote East African Structure categories to non-East-African businesses (Optional vs soft suggestion).

6. Support for hierarchical vs flat category presentation in customer-facing channels (business choice).

7. Policy on business-declared claims (Halal, Traditional, Vegan) — certification flags, audit trail requirements, liability language.

— End of Reconciliation and Gap Report —

This report does not bind PEWA to any architectural or commercial decision.
